PAPER / SECTION 5.7

https://github.com/aruncmichael-alt/ocf-v1-beyond-vram/blob/main/paper/case-study.md

HOW TO READ THIS COMPARISON

- Cloud rows price the same recorded local token mix. They are counterfactuals, not invoices or quality comparisons.
- The OpenCode ledger, live-process counters, and retained timing log are separate, overlapping, non-additive views.
- The DOI above identifies the Zenodo concept record. v1.2.0 continues the economics package; v1.0.x paper releases remain.
